THE PROBLEM

A real shop and a ghost shop look the same.

VeriDuka is a check a buyer runs before they send money on M-Pesa. A polished Instagram page, a WhatsApp chat, or a paybill screenshot can belong to a registered shop or to someone who disappears after payment.

INSTAGRAM PAGE

12.4k followers, tidy grid, "DM to order".

REGISTERED SHOP | GONE AFTER PAYMENT

WHATSAPP CHAT

"Send Ksh 2,500 to paybill 987654." Confirmation attached.

REGISTERED SHOP | GONE AFTER PAYMENT

PAYBILL SCREENSHOT

"Confirmed. Ksh 2,500.00 sent to paybill 987654."

REGISTERED SHOP | GONE AFTER PAYMENT

> **Star ratings are easy to flood, and a company search misses the shops that never registered. The buyer is left guessing.**

THE ANSWER

Search anything. Get one number from 0 to 100.

They search a paybill, a phone number, an Instagram handle, a KRA PIN, or a shop name. VeriDuka returns one score. The score starts at 50 and moves only on the legal record and on reports that describe a real order.

50	**Where every shop starts.**
+25	An active KRA PIN or a registered business name.
+5	Praise that describes a real order, up to +20.
-20	An unresolved scam.
-5	A late delivery or poor service. A complaint from the last 30 days counts double.
0	Spam is kept on file and does not move the score.

What the number tells the buyer

Do not pay upfront. | Pay on delivery. | Safe to pay on M-Pesa.

HOSTS IT

RumptyCloud

The website and the API are one Docker app. Rumpty runs that app, keeps the shops in one database, and serves the page a judge opens. The same container is what you see on the public demo, with 20 Kenyan shops across every score band.

CARRIES IT

ThriveWave

A buyer texts VERIFY and a paybill. The reply is the same number, the same band, and the same advice as the website, in one SMS. COMMENTS and NEXT read the saved reviews on a feature phone. REGISTER files a new shop. On the demo, a judge types their own 07 number and the reply is sent to that handset.

READS IT

Cursor

Cursor built the reader that looks at a buyer's own words, in English or Swahili, and labels the report as a scam, a late delivery, poor service, praise, or spam. The server runs it on every report, so the same sentence always gets the same label. A comment changes the score only after it is filed and that reader accepts it. Instagram, Facebook, and TikTok stay as links the buyer opens.

BESIDE THE SCORE

M-Pesa Verified means the names agree.

M-Pesa Verified means the business name on that paybill is the same name as the KRA or BRS record. A borrowed till fails that check. The badge does not add points. The points still come only from the legal record and from reports the reader accepts.
